PROFESSIONAL SUMMARY

Cybersecurity engineer with 6+ years of professional experience in security operations, incident response, and detection engineering. Served on the Trellix SME team supporting Helix, HX, and NX operations across a North American client's 12 business units, acting as the escalation point for incidents generated by the Trellix security stack. Led technical investigations for incidents originating from Trellix product alerts, determining scope and guiding customer teams through remediation.

WORK EXPERIENCE

Trellix

Washington, DC

Cybersecurity Engineer (Contract)

September 2023 - March 2026

- Served as the escalation point for incidents across a client's 12 business units, leading technical investigations of alerts from Trellix Helix, HX, and NX, determining scope, and guiding customer teams through remediation.
- Determined root cause during incident investigations, establishing initial access and how the compromise occurred.
- Acquired forensic images and performed dead-box examinations under documented chain of custody, collecting host, memory, and network artifacts and building timelines of attacker activity written into investigative findings.
- Performed host, memory, network, and malware analysis during Trellix incident investigations using Volatility, FTK, EnCase, Velociraptor, Wireshark, Zeek, FLARE VM, and Ghidra as appropriate.
- Helped define customer investigation and response playbooks for Trellix Helix Hyperautomation.
- Implemented and tuned 15+ production detections in Trellix Helix using HX endpoint and NX network telemetry, combining prebuilt content with custom rules mapped to MITRE ATT&CK.
- Partnered with system owners to onboard and validate 15+ production log sources in Trellix Helix, including application logs collected through NXLog, SQL Server logs, endpoint telemetry, and cloud sources.
- Maintained the formal Incident Response Plan, runbooks, severity definitions, and knowledge base entries, and facilitated tabletop exercises with stakeholders.
- Reviewed public and vendor threat reporting for emerging attacker TTPs, mapped behaviors to MITRE ATT&CK, and applied that threat intelligence to guide threat hunting across SIEM and EDR and drive threat detection updates.

WithSecure, Inc.

New York City, NY

Pentesting Intern

June 2022 - August 2022

- Contributed to eight team-delivered penetration tests during a security internship, working under manager guidance alongside other testers.
- Conducted Windows malware research during the WithSecure internship to understand execution techniques and identify endpoint detection opportunities.

HCL Technologies Pvt. Ltd.

Noida, UP, India

Tier 3 SOC Specialist (Multiple Clients)

October 2017 - July 2021

- Served as the Tier 3 escalation coordinator during priority incidents in a 24/7 managed-SOC engagement, organizing client response bridges and guiding investigation, containment, and remediation.
- Built Siemplify SOAR playbooks to automate indicator enrichment, phishing response, and containment workflows while preserving analyst approval on high-risk actions.
- Authored SPL queries during HCL incident investigations to reconstruct historical activity and test persistence hypotheses.
- Briefed client CISOs and executive stakeholders during significant incidents on investigation scope, business impact, current status, and remediation priorities.
- Reviewed recorded alert dispositions and tuned SIEM rules with client teams to reduce recurring false positives.
- Formally mentored Tier 1 and Tier 2 analysts on SOC processes, investigation workflows, security tools, and escalation handling.

PROJECTS

- **Autonomous SOC Triage Agent (Python, FastAPI, Claude API):** Built a tool-calling agent for EDR and SIEM alert triage that selects threat-intel tools under a server-enforced call budget; a deterministic policy engine holds final authority. Unit tests and a labeled eval set.
- **Endpoint Modules Health Check Automation:** Built Python automation that streamlined endpoint validation by automating repetitive checklist steps and reducing manual analyst effort.

TECHNOLOGY AND TOOLS

SIEM and Monitoring: Trellix Helix, Splunk, QRadar, Microsoft Sentinel
Endpoint and EDR: Trellix HX, CrowdStrike Falcon, SentinelOne, Microsoft Defender for Endpoint
Network Security: Trellix NX, Trellix PX, Snort
Forensics: Volatility, FTK, EnCase, Velociraptor, Wireshark, Zeek, Ghidra
Identity and Access: Entra ID, Okta, SAML / OAuth 2.0 / OpenID Connect
AWS Security and Automation: AWS, Python, PowerShell, SPL, KQL, Siemplify, hyperautomation

EDUCATION

University of the Cumberlands <i>Executive Ph.D. in Information Technology, emphasis Artificial Intelligence</i>	Williamsburg, KY <i>March 2026 - Present</i>
The University of Maryland, A. James Clark School of Engineering <i>Master of Engineering in Cybersecurity, GPA: 3.94</i>	College Park, MD <i>May 2023</i>

CERTIFICATIONS

- CompTIA Security+
- ISC2 CC
- Siemplify Certified SOAR Analyst (SCSA)

PROFESSIONAL DEVELOPMENT

- ISC2 CISSP - exam scheduled 2026
